# Introduction

As a result of the increased demand for temporary power generators which operate with high-voltage current in the areas of entertainment and industrial applications, selection of the high-current connector is particularly important, in order to guarantee safety and reliability for any application.

The single-pole PowerSAFE connectors were developed for the connection of single- and three-phase high-current circuits. They have been used and tested in the world's harshest environments, from the oil fields of Canada to data processing centres in the Arctic Circle. They are the right choice for demanding applications on account of their impressive technical capacity, safety functions, robust design, reliability and quality.

The standard safety functions include an additional locking system which requires a key to activate the connection. In addition, all electrical contacts on all plugs have finger-proof protection against electric shock, whereby the risk of accidental contact when switching on the connector is reduced.

The connectors are available in line and panel mount format with either crimp or screw contacts. The PowerSAFE connectors can be used with single-core cables between 25 and 300 mm<sup>2</sup> for high current connections up to 800A and are currently the highest rated and safest connectors of their type on the market.

#### High current carrying capacity

The PowerSAFE connector's advanced contact design achieves its 800 A\* continuous rating by utilising an arrangement of 29 transfer bridges. Each transfer bridge is rated at 30 A, giving a total of 870 A per contact. \*Subject to environmental factors, cable choice, etc.

### Technical Data

No of contacts: Max. continuous current rating: Surrge current: Short circuit rating: Cable cross sectional area C.S.A: Contact termination: Mating method: Operating voltage: Max. rated voltage to earth: Min flashover: Insulation resistance: Protection category: Protection against electric shock: Flammability: Mating cycles: Material housing: Contact area:

1 up to 800A 75 kA up to 35.5 kA 25 mm<sup>2</sup> to 300 mm<sup>2</sup> Screw or crimp connection Bayonet lock 1'000 VAC 2kVAC/3kVDC 9.5kVDC >5MOhm@500VDC IP67 IP2X UL94-V0 > 500thermoplastic silver

#### Product features

- maximum continuous current rating 800A
- colour coded and mechanically keyed to prevent connection errors
  Flame retardant UL94-V0
- Locking mechanism to prevent accidental disconnection under load
  Finger proof contacts both genders (IP2X) to prevent access to electrical contacts when uncoupled
- silver-coated, self-cleaning contacts
- enhanced impact-resistant housing
- Protection category IP67
- for cables between 25 mm<sup>2</sup> and 300 mm<sup>2</sup>
- temperature resistant materials
- integrated cable strain relief
- Cable glands with generous clamping range
- Rubber protective caps to protect connectors from moisture, dirt and abrasion when uncoupled (optional)
- compatible with PowerLock
- CE-konform in EN 60309-1, DIN-EN 61984 and IEC 60900

Video tutorial for PowerSAFE assembly You will find further technical information in the PowerSAFE connector crimping guide

<sup>3</sup> 45° adapter kit incl. screws for mounting

The PowerSAFE Box is a 5-pin connecting unit for connecting to a generator or the mains. The sequence of connecting and disconnecting is predetermined to ensure the safety circuits (PE+N) are the first to be connected and the last to be disconnected. The coded connections also prevent the possibility of incorrect contacts.

#### Functional description

- The cover of the earth connection is opened by rotating it clockwise using the special key provided. Insert the PE high current plug to the end stop and then rotate it clockwise (lock).
- After inserting the earth conductor properly, the protective cover of the neutral conductor opens – also insert the neutral conductor to the end stop and then rotate it clockwise.
- Connect all L1 to L3 phase conductors to the switchbox in the same way – comply with correct sequence! Then the L3 phase conductor contact must also be locked with the special key in the clockwise direction. L3 is now also locked and unwanted disconnection is prevented.
- 4. This process triggers two processes:
  - a) It closes the L3 connection to prevent accidental interruptions under load and also prevents access to the device.
  - b) The microswitch (toggle function) is also activated and can therefore switch the switchbox on or off via an external contactor. (Leading or lagging) The load can be regulated in a controlled manner by connecting this switch to the power distribution.
- The removing and unplugging of the individual conductors is carried out in reverse order and procedure: Open the lock at L3 using the special key L3 and undo all connections beginning with L3.
- Important: All protective covers close automatically after removing the plug. (touch protection).

#### Dimensions Item no. 134192 and 144558:

Version for installation in housing/wall 108×483×149 mm (H×W×D)

#### Dimensions Item no. 130131:

Rack installation version  $88 \times 483 \times 149 \text{ mm} (H \times W \times D)$
