

**Client:** EWZ  
Power station of Zürich VEW  
8005 Zürich

**Task:**

Main distributor boxes with counters are generally composed of steel sheet. For the transport respectively the installation on the construction site there is usually a truck or a crane needed. However for many small constructions sites or factory-made rebuilding's a luxury execution of the distributor boxes is not necessary.

**Our solution – small but powerful:  
The "mini" distributor box with counter !**

- connecting fuse, FI-protection and fuse protection integrated into the box
- transparent, UV-resistant door, lockable (2 square-cut locks) enable a simple reading of the counter-reading
- large connecting terminal covered separately
- compact counter
- power socket with high protection category, outside installed, usable at any time

- robust galvanized steel support with cable take-up option
- inscription engraved into the distribution box ( long-lasting and resistant to abrasion)
