

Client: Matterhorn Bahnen AG, 3920 Zermatt

Task: **Illumination of the glacial cave**

- Optimal illumination of a glacial cave
- Mystic illumination of ice sculptures by means of bright, clear and particularly cold light, in order to reinforce the effect for the visitors
- High tightness, water- and dustproof execution
- Irreproachable function even if the temperatures are constantly below zero

Let us cast a spell on you and follow us into the glacial cave!

Our solution:

- The complete glacier grot was plunged into a constant dazzle-free light by using 20 surface lights PRIMA 38W
- In spite of the large light performance of 2580 lumen, the heat development remains little (slight danger of melting)
- Low power consumption
- The installation has not to be made in a special position e.g. it can be executed: loose, horizontal or upright.
- Shock-resistant, water- and dustproof
- The sculptures and natural variations are perfectly illuminated

Marvellous pictures, speaking for themselves!
