

Client: Jet Aviation AG, Basel-Flughafen

Task: All aircrafts used in the air-traffic have to be controlled regularly. In order to meet the high safety requirements an optimal illumination of the passenger area is of utmost importance.

READY FOR TAKE OFF!

Our solution:

- Solid and still light lamp with support with clear shock-resistant plexiglas tube (diameter 180 mm)
- 4 fluorescence tubes 36W white, vertical mounted
- 2 electronic ballasts integrated into the lamp
- High luminous efficiency
- Complete with feed line
- With integrated handhold for simple transport
- Little heat development
- Total height approx. 1280 mm

- Solid bottom support, white varnished
- 4 swinging elements made of insulating material for a faultless installation
- Cable insertion additionally protected

- Plexiglas tube with cover, removable, guarantees an simple exchange of the fluorescence tube
- Fibre-glass reinforced synthetic handle for transport aid
