

client: Planetspa CH-Schaffhausen, in collaboration with
distribution partners

task / project: lightning of a fountain

Fountain of the municipality «Kirchdorf an der Iller» in Germany

initial situation

In the course of the advancement of LED modules, which were mostly applied in tunnels or railway stations up until now, we have advanced the product range of «LED lights» steadily. Today we talk about marker lights or even decoration lights. Thereby are no limits about the most diverse purposes and installation sites.

With the ToppLED®-line you can realise sub aqua-illuminations for public or private swimming pools, well lightings or some other creative solutions in the range of wet rooms.

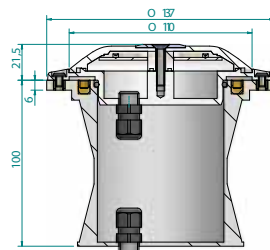

In these sections, we break the mould and are co-working with commercial enterprises as distribution partners, which have a direct access to the target markets.

special features:

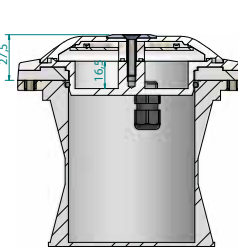

- applicable under water because of protection class IP68
- different colours available: red, green, blue, white and RGB (red-green-blue)
- eligible illuminating direction - lateral beaming or horizontal
- available accessories: control unit, power supply unit, cable etc.

Furthermore we offer different services such as planning, special calculations or construction management and support on site.
