

With our safety tubular light GT you are safely guided to your destination

Client:

Centre d'Entretien de l'autoroute, 1906 Charrat

Task:

The illumination is resistant against any sort of environmental influences

Task

The sign boards or warning signs on motorways are important visual aids for a better orientation of the drivers. Because the traffic at night depends on this sign boards as well, it was searched for a weather proof, maintenance-free light, which offers a very high light intensity in addition.

Our solution

- Safety tubular light GT – 58W / 230 V – with shock-resistant plexiglas
- Electronic ballast integrated into the lamp (without starter – little service needed)
- Degree of protection IP67, dust- and water proof also under extreme conditions
- Dazzle-free light – high light intensity
- All screws and supports are made of stainless steel

- Simple installation by means of stainless mounting brackets
- Discrete installation
- Solid and robust construction
